e-Spark

Igniting the Future of Electrification

DIGITAL INFRASTRUCTURE FOR ENERGY COMPLIANCE & E-CREDITS

The Problem & Solution

Problem

- EV charging is capital intensive
- Compliance value is fragmented
- Certification & reporting is manual and opaque

Solution

- e-Performance: MRV + claims orchestration layer
- Digital compliance automation
- Token-ready certificate infrastructure

Revenue Model

- SaaS per CPO (compliance automation)
- % of issued certificates (RTFO / REDIII)
- Future marketplace fee (e-Credit NFT trading)

Digital Energy Compliance Markets

Framework	Target market 2026	Target market 2030
REDIII – RTFO EU	€1.24B	€3.7B
Guarantees of Origin	€450M	€750M
Voluntary Carbon Credits	$150M	$1.2B

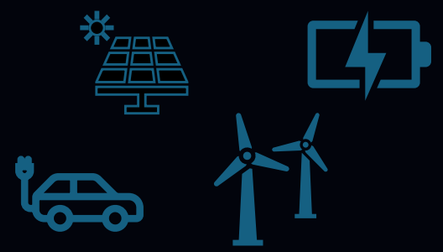
Single MRV infrastructure enabling all three markets.

e-Spark

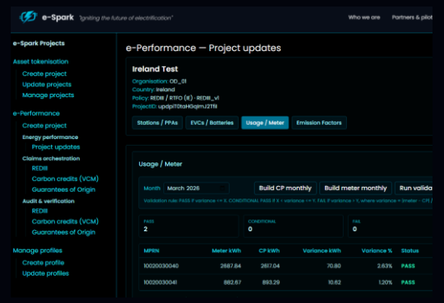
MRV as the Compliance Engine

Where MRV Sits in the Ecosystem

Energy Source or Delivery Assets



MRV Engine (e-Performance)



Claims Orchestration

Regulators / Hedera

Hedera

Energy (kWh → MJ) is the primary claim substrate

e-Spark

Ireland — The Optimal Entry Market

Why Ireland First?

Framework just being set

Early mover advantage

Highly concentrated CPO market

4 players ≈ 80%

Simpler REDIII implementation

vs DE / AT / NL

Small market

Safe regulatory sandbox

Operational advantage

Irish team, local network

> *Ireland is our regulatory launch market before expanding across Europe.*

e-Spark

One Performance Layer — Multiple Markets

Our current focus is REDIII, but we have other two markets to expand into.

1. REDIII / RTFO
2. Voluntary Carbon Credits
3. Guarantees of Origin

The energy reconciliation methodology does not change. Only the regime module changes.

e-Spark

Strategic Fit with Hedera Ecosystem

1

Near-Term: Compliance anchoring

- Hedera Consensus Service
- Hedera anchoring of claims
- Verifiable compliance artefacts
- Guardian-compatible VC layer

2

Medium-Term: Blockchain Registry & e-Credit NFTs

- HTS-based e-Credit NFTs (RTFO certificates)
- Retirement controls
- Registry-grade audit trail

3

Long-Term Vision: Marketplace

- Marketplace for compliant e-Credits
- Cross-border interoperability
- Real-world asset digitisation

Why Hedera for e-Spark

- Enterprise governance
- Low fees & high throughput
- Native token service (HTS)
- Guardian for compliance-grade credentials
- ESG-aligned ecosystem

What e-Spark Brings to Hedera

- Real-world regulatory use case
- Monthly recurring TPS (reporting cycles)
- New enterprise accounts (CPOs, regulators)
- ESG-aligned RWA tokenisation
- Gateway to EU compliance markets
